Chiamaka Adeyemi-Brooks

Android Engineer

Android engineer who has spent five years making money apps feel calm. I like Kotlin, small pull requests, and screens that still make sense to my mum. Moved from Lagos to London in 2022 and kept building for people who pay with their phones first.

EXPERIENCE

Android Engineer II

Pennyroll · London, UK · Aug 2022 – Present

- Led the move of the savings app from XML views to Jetpack Compose, screen by screen, over 14 months without a feature freeze.
- Cut cold start time on low-end Android phones from 3.1 s to 1.4 s by deferring SDK set-up and trimming the dependency graph.
- Built the round-ups feature end to end with the payments team; 41% of active users switched it on within three months.
- Run the mobile guild's monthly code review clinic for eight engineers across two squads.

Android Developer

Kudipay · Lagos, Nigeria · Mar 2020 – Jul 2022

- Shipped offline-first transfers that queue payments on patchy networks and retry safely, reducing failed transfers by 27%.
- Wrote the app's first UI test suite with Espresso, taking coverage of the payments flow from zero to 70%.
- Added a USSD fallback for customers without mobile data, now used by 120,000 people a month.

Junior Mobile Developer

Hatchworks Studio · Lagos, Nigeria · Jun 2019 – Feb 2020

- Built client apps in Kotlin and Flutter for a pharmacy chain and a school fees platform.

EDUCATION

B.Eng. Electrical and Electronics Engineering

University of Lagos · Lagos, Nigeria · 2014 – 2019

- Final-year project: a low-cost glucose reader that sends readings to a phone over Bluetooth Low Energy.

PROJECTS

naira-format

Kotlin, Kotlin Multiplatform · 2021

- A small library for formatting naira and kobo amounts on Android and iOS; 600 stars on GitHub and used in production by four Lagos fintechs.

TALKS AND COMMUNITY

- Speaker, Droidcon London 2023: “Compose on a £60 phone”.
- Mentor, CodeBridge Lagos (2020 – 2022): coached 30 first-time Android developers through their first published app.
