Staff engineer who likes boring infrastructure and the people who keep it running. Eleven years building payment and data systems in Go, Java and Kotlin; I have spent the last four making a 300-engineer company's deploys safe enough that nobody talks about them.

Experience

Staff Software Engineer, Platform, Lumenpay GmbH *(Berlin, Germany)* Mar 2021 – Present

- Led the design and rollout of a progressive delivery system for 180 services, cutting failed production deploys by 64% in its first year.
- Set up the payments reliability programme: SLOs for 14 critical flows, an error-budget policy agreed with product, and a weekly review I still chair.
- Drove the migration of the ledger from a single PostgreSQL primary to a sharded CockroachDB cluster with no customer-visible downtime.
- Cut the platform group's cloud spend by €1.1M a year by rightsizing Kubernetes node pools and moving batch jobs to spot instances.
- Mentor six engineers across three teams; two have since been promoted to senior.
- Wrote Lumenpay's incident review guide and trained 40 incident commanders.

Senior Software Engineer, Lumenpay GmbH *(Berlin, Germany)* Jun 2018 – Feb 2021

- Built the card authorisation service in Go, handling 2,500 requests per second at peak with a p99 latency of 85 ms.
- Introduced contract testing between 22 services with Pact, replacing a shared staging environment that broke every week.
- Led a team of five through PCI DSS Level 1 certification for the card platform.

Software Engineer, Tabuleiro Analytics *(Lisbon, Portugal)* Sep 2015 – May 2018

- Wrote the streaming ingestion pipeline in Java on Kafka that took the product from daily to near-real-time reporting for 300 retail clients.
- Owned the on-call rotation for the data platform and reduced pages from 30 a week to 6.
- Gave the company's first internal talks on property-based testing; the practice is now part of onboarding.

Junior Developer, Correio Digital *(Porto, Portugal)* Jan 2013 – Aug 2015

- Maintained the parcel tracking website (Java, Spring MVC) used by 1.2 million customers a month.
- Automated the release checklist with Jenkins, taking releases from a half-day manual process to 40 minutes.

Talks and writing

- "Deploys nobody notices", GopherCon EU 2024, Berlin.
- "What our ledger migration taught us about idempotency", Lumenpay engineering blog, 2023.

Education

M.Sc. in Informatics Engineering, University of Porto *(Porto, Portugal)* 2011 – 2013

- Thesis on consistency models in geo-replicated databases, graded 18/20.

B.Sc. in Informatics Engineering, University of Porto *(Porto, Portugal)* 2008 – 2011

Certifications

Certified Kubernetes Administrator (CKA), The Linux Foundation 2022

Skills

Languages: Go, Java, Kotlin, SQL, Python
Infrastructure: Kubernetes, Terraform, Argo Rollouts, CockroachDB, PostgreSQL, Kafka
Practices: SRE, incident management, capacity planning, technical writing
Spoken: Portuguese (native), English (fluent), German (B2)
